

Business Calculus (MATH 2350)

Summer 2019

Friday, 05/31/2019

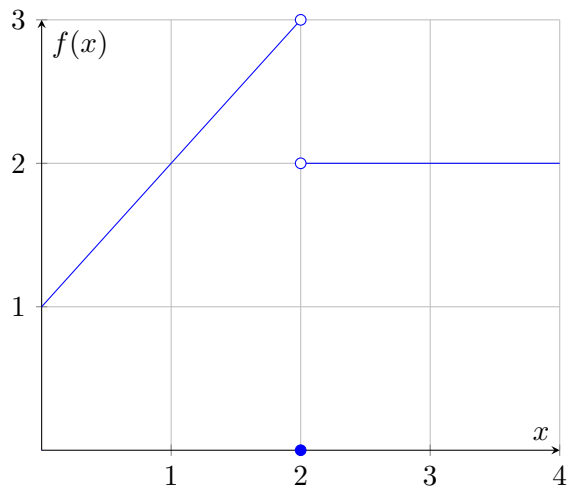

Quiz 1: Section 10.1, 10.3, 10.4

Name (Print): _____

Score: _____ / 100

Section 10.1

1. Use the graph of the function f shown to estimate the indicated limits.

(a) 5 points $\lim_{x \rightarrow 2^-} f(x)$

(b) 5 points $\lim_{x \rightarrow 2} f(x)$

2. 10 points Find $\lim_{x \rightarrow 3} \frac{x-3}{x^2-9}$ or explain why the limit does not exist.

3. 10 points If $f(x) = \begin{cases} x+2 & \text{if } x \leq 0 \\ 2-x & \text{if } x > 0 \end{cases}$, find $\lim_{x \rightarrow 0} f(x)$.

4. Given that $\lim_{x \rightarrow 2} f(x) = 1$ and $\lim_{x \rightarrow 2} g(x) = -11$, find the indicated limits.

(a) 5 points $\lim_{x \rightarrow 2} 2g(x) + 5f(x)$

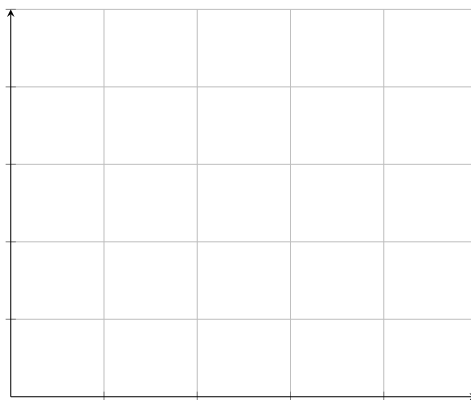

(b) 5 points $\lim_{x \rightarrow 2} \frac{2x - f(x)}{x^2 + 11}$

5. A cell phone company charges \$40.00 for the first 1000 minutes of calls per month, and \$0.15 for each additional minute.

(a) 5 points (bonus) Write a piecewise definition of the charge $F(x)$ for x minutes of calls in one month.

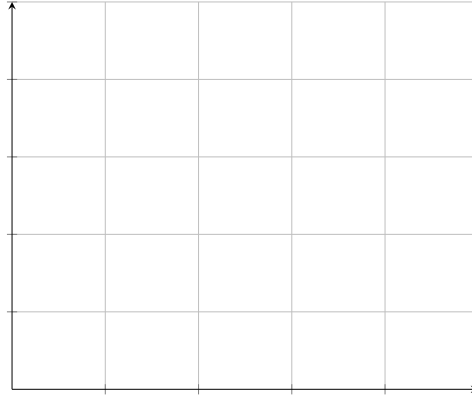

(b) 5 points (bonus) Find $\lim_{x \rightarrow 1000} F(x)$ or explain why it does not exist. Show your work!

(c) 10 points (bonus) Graph $F(x)$. Label your graph, indicating the values of x and $F(x)$.

Section 10.3

1. 10 points Sketch a possible graph of a function f such that $\lim_{x \rightarrow 3^-} f(x) = 2$, $f(3) = 2$, and f is not continuous at $x = 3$.

2. Determine where each function is continuous. Express your answer in interval notation.

(a) 5 points $f(x) = 6x^4 + x$

(b) 5 points $f(x) = |x|$

3. 10 points Let $f(x) = \begin{cases} \frac{x^2 + x - 6}{x - 2} & \text{if } x \neq 2 \\ 7 & \text{if } x = 2 \end{cases}$. Is $f(x)$ continuous at $x = 2$? Explain.

Section 10.4

1. Find the indicated quantities for $f(x) = 8x^2 + 1$.

(a) 5 points $\frac{f(2) - f(1)}{2 - 1}$

(b) 5 points $f'(1)$

2. The revenue (in dollars) from the sale of x tables is given by

$$R(x) = 100x - 0.1x^2, \quad 0 \leq x \leq 1000.$$

- (a) 5 points Find the average change in revenue per table if production is changed from 200 to 225 tables.
- (b) 10 points Find $R'(x)$ *by using the definition of the derivative* (i.e. by using limits, not the linearity of the derivative and the power rule).
- (c) 5 points Find the instantaneous rate of change of revenue at a production level of 200 tables.
