

Section 5.3

1. 5 points Evaluate the following integral using the Fundamental Theorem of Calculus. Sketch the graph of the integrand and shade the region whose net area you have found.

$$\int_{-3}^1 (x^2 + 2x - 3) dx$$

Section 5.4

2. 5 points Find or approximate all points at which the following function equals its average value on the given interval.

$$f(x) = 11 - 3x \text{ on } [1, 6]$$
